

GruloSnow

Snow-cannon hose in double jacket construction

Especially developed as a high pressure delivery hose for snowmaking systems. This double-jacket hose of high-tenacity polyester yarn, woven on circular looms, with a high-quality ozone and UV-resistant EPDM-rubberlining and an externally polyurethane coating ensures a long service life and can be used to -40 °C. The **GruloSnow** has a protective cover hose of 1,500 mm length on each end. For the integration of fittings, we recommend pressing in with TÜV tested **LÜDECKE** couplings of stainless steel and a working pressure of max. 60 bar.

Technical characteristics

Temperature range: To -40 °C.

Standard Length: 15 m, 20 m, 30 m, 40 m

Colour: Yellow | also available in other colours

Construction

Cover: PU coating

Reinforcement: High strength polyester filament yarn, circular woven

Lining: Strong wall EPDM Manchon
